CYCAS REVOLUTA

SAGO PALMS

Cycas Revoluta is naturally found in the Japanese islands of Ryukyu and it is the most popular and widely cultivated cycad. It is frost and drought tolerant but prefers a sunny well drained area. It makes an excellent landscape plant and is

Sago Palm on East Plaza Entrance

In late spring , a mature male Sago Palm will produce a golden cone. It looks like a giant pine cone and will grow well above two feet. A female sago will produce a huge golden flower. It will open when it's fertile.

Answer for No. 3: No, you don't need a greenhouse to grow sago palms from seeds. All you need are male and female cycad in your yard.

best kept away from paths since the leaves are spiky. Cycas Revoluta is commonly known as Sago Palm.

**Answer for No. 2:
It is called a flower on a female sago palm and a cone on a male sago.**

Cone of a male Sago Palm
